

Module 4. Landscape level assessment and SLM best practices identification

Legislative framework, strategies and documents at state, entity and local level are identified and analysed with purpose to define gaps and barriers in implementation of SLM measures and needs, possibilities and further steps needed for their application.

Local stakeholder workshops on SLM Delivery Building Capacities, including important and beneficial SLM opportunities for delivery were conducted in 2018 in three pilot areas (Pelagićevo, Šamac and Trebinje).

WOCAT SLM questionnaires are translated (guidelines and instruction for questionnaires) and used in local stakeholder workshops.

Selected SLM best practices were assessed and documented on the ground (using QT and QA) by a team of trained SLM experts and local stakeholders.
