

- It is necessary to work on capacity building of all stakeholders, especially at the local level and exchange of experience with EU and UN institutions.
- Activities on land protection and land degradation issues should be delegated to the relevant ministries, all levels of decision-making, the public, with the obligation to consult with the local communities.
- It is also necessary to synchronize the work of technical institutions dealing with SLM, so as to avoid misunderstanding and overlapping of data which would be misleading and economically unsustainable.
- It was noted that the Federation of BiH legislation has many deficiencies and requires review and harmonization. The implementation of the GAP analysis and legal analysis regarding the improvement of the existing legal framework and the book of rules governing the land has been recommended.
- Similarly, it has been stated that current laws are not properly applied or complied with.
- The Land Capability Map as SLM tool has been recognized as a good basis for the establishment of a system for monitoring the condition of land resources and changes in space, as there is a legal requirement for each municipality to produce and approve such maps (land quality classes) at a M1:10.000 scale for the purpose of spatial planning.
- The LDN goals can best be achieved through the process of spatial planning, with the support of other sectors and ministries.
- Work on solving common problems at the local level, especially in the context of inter-community cooperation.
- Funds from change of use of the land and other financial opportunities (e.g. Fund for Environment) should be specifically directed to SLM activities.
- Make an analysis of all the SDGs in which land appears as a resource, in order to achieve synergy and get involved in various projects.
- There is a huge need for continuous promotions of SLM and land protection. Brief key institutions on SLM.
- The academic community has been recognized as a key group to assist in the SLM process, to combat land degradation in general.
